

SEEING THE LIGHT

PRODUCT REVIEW
KORR LED CAMP LIGHT

WORDS BY SCOTT BUTLER, PHOTOGRAPHY BY ANTHONY WARRY

Can a powerful camp-lighting system really be versatile, easy on your batteries and super bright all at the same time?

With so many options of camp lights on the market these days, it comes as no surprise that many buyers can get a little confused about which lights will be best for their needs. When a new camp lighting kit came across our desk that promised versatility, affordability and a huge light output that was not too hard on your batteries, well, we just had to take a closer look.

There are four LED light strips set in an alloy housing that allow you to hard-mount the strip (or strips) if required, and each comes with a dimmer/on/off switch. Also supplied are some extension cables that can be plugged between each, which use watertight connectors that screw together.

The extension cables supplied enable you to fix the lights around different sections of your campsite when using it as a portable kit, as well as allowing a DIYer to fix them into a vehicle or camper even if they have limited electrical knowledge. To connect to power, the kit has a cigarette plug fitted to the main power cable, with a battery terminal adaptor supplied for when a cigarette socket isn't an option.

The lights can take a bit of time to set up if you intend to use them as a portable kit, but if you are staying in the one campsite for a week, you could justify the extra set-up time compared to an old fluoro camp light. The option of being able to dim all or individual light strips is a great option, as this allows you to dim a light in the tent for when the kids go to bed but still have full light outside for the night's activities.

The amount of light output is one of this light's biggest drawcards, with enough light for most coming from just one strip, easily lighting up the same area the older-style fluoro lights would. What sets this kit apart is the added security of being in a solid housing and its ability to be set up with minimal electrical knowledge. With a total of four strips in the kit, it makes the pricing comparable to other

styles of LED strip lights on the market, but with the advantage of being incredibly versatile.

If you would like to know more about these lights or any of the other LED products, you can phone 0414 883 523 or jump on www.korrlighting.com.au for all the facts. This system tested retails for \$249 for the four-bar kit or you can purchase a three-bar kit for \$199.
